ZERO’s Impact in Nevada

Patient Programs

- ZERO360 is ZERO’s comprehensive patient navigation service that provides individualized case management to help patients and their families connect with financial assistance, navigate insurance, and find other kinds of support including emotional support and even transportation assistance.
- ZERO also offers peer-to-peer support through our Us TOO Support Groups and MENtor programs. We match patients and caregivers with someone who has been on a similar journey to provide ongoing, one-on-one support. We also run a nationwide network of support groups for those affected by prostate cancer.
- ZERO Connect is our online private Facebook support group where you can connect with others affected by prostate cancer, learn from their experiences, and ask questions to patients and loved ones across the country.

ZERO Prostate Cancer is the leading national nonprofit with the mission to end prostate cancer and help all who are impacted. ZERO advances research, provides support, and creates solutions to achieve health equity to meet the most critical needs of our community. Visit our website: www.zerocancer.org

CDC’s National Comprehensive Cancer Control Program (NCCCP) Funding in Nevada:

• Promote, increase, and optimize the appropriate use of high-quality cancer screening to increase early detection of cancer among Nevadans. The data supports early screening for breast, cervical, colorectal, oral, and lung cancers. Research has not yet proven if the potential benefits of prostate cancer screening outweigh the limitations of the testing and treatment. The American Cancer Society and other major health organizations recommend men make an informed decision with their doctor about whether to be tested for prostate cancer. It is recommended starting at age 50 men talk to a doctor about the potential benefits and risks associated with prostate cancer screening to decide if testing is the right choice for them. Men at higher risk, those who are African American or have a father or brother who had prostate cancer before age 65, should talk with a doctor starting at age 45. If men decide to be tested, they should have the prostate-specific antigen (PSA) blood test with or without a rectal exam. How often they are tested will depend on their PSA level and should be discussed with a physician.
