**ZERO's Impact in New York**

**Patient Programs**

- ZERO360 is ZERO's comprehensive patient navigation service that provides individualized case management to help patients and their families connect with financial assistance, navigate insurance, and find other kinds of support including emotional support and even transportation assistance.
- ZERO also offers peer-to-peer support through our Us TOO Support Groups and MENtor programs. We match patients and caregivers with someone who has been on a similar journey to provide ongoing, one-on-one support. We also run a nationwide network of support groups for those affected by prostate cancer.
- ZERO Connect is our online private Facebook support group where you can connect with others affected by prostate cancer, learn from their experiences, and ask questions to patients and loved ones across the country.

**ZERO Prostate Cancer** is the leading national nonprofit with the mission to end prostate cancer and help all who are impacted. ZERO advances research, provides support, and creates solutions to achieve health equity to meet the most critical needs of our community. Sloan Kettering Institute For Cancer Research	2012	\$6984950

**CDC’s National Comprehensive Cancer Control Program (NCCCP) Funding in New York:**

- According to the CDC, general population screening for certain cancers (e.g., prostate, skin, or ovarian cancers) has not been proven successful in lowering cancer-related deaths.<sup>2</sup> Individuals should understand their personal risk factors and family histories and speak with health care providers about screening options. Symptom recognition and prompt follow-up can also be of benefit in detecting cancer in earlier stages (e.g. ovarian cancer). Given the uncertain benefits of population-based screening for certain cancers in average-risk individuals, individuals should make informed decisions about screening with their health care providers.
- Objective: By 2017, reduce barriers to screenings and diagnostic services for disparate populations so that there are no significant differences in screening rates and rates of invasive or late stage diagnosis by race, ethnicity, income level, education level, insurance status or geographic location.
