INCIDENCE RATE IN NEVADA

90.4 IN EVERY 100,000 MEN
will be diagnosed with
prostate cancer in their lifetime

19.7 IN EVERY 100,000 MEN
die from the disease

This year in Nevada:
New cases: **2,230** | Deaths: **370**

NATIONAL RANKINGS BY STATE:

#50 for prostate cancer incidence
#26 for prostate cancer deaths

Source: Estimates based on 2024 data from the American Cancer Society

ZERO's Impact in Nevada

Patient Programs

- **ZERO360** is a free, comprehensive support service that helps patients and their loved ones navigate insurance, find resources to help pay for treatment and living expenses, connect with emotional support services, and ensure access to care.
- **ZERO's nationwide Us TOO support group network** offers a variety of peer-led virtual and in-person groups offering emotional support, resources, and education to empower those impacted by prostate cancer to make informed decisions about their care.
- **ZERO's MENtor program** matches patients with trained, volunteer MENtors who have been on a similar journey to provide ongoing, one-on-one support.
- **ZERO Connect** is our online private Facebook group where you can connect with others affected by prostate cancer, ask questions, and learn from their experiences.

GRANT RECIPIENT	YEAR	AMOUNT
Roseman University Of Health Sciences	2006	\$702,000

CDC’s National Comprehensive Cancer Control Program (NCCCP) Funding in Nevada:

- Promote, increase, and optimize** the appropriate use of high-quality cancer screening to increase early detection of cancer among Nevadans. The data supports early screening for breast, cervical, colorectal, oral, and lung cancers. Research has not yet proven if the potential benefits of prostate cancer screening outweigh the limitations of the testing and treatment. The American Cancer Society and other major health organizations recommend men make an informed decision with their doctor about whether to be tested for prostate cancer. It is recommended starting at age 50 men talk to a doctor about the potential benefits and risks associated with prostate cancer screening to decide if testing is the right choice for them. Men at higher risk, those who are African American or have a father or brother who had prostate cancer before age 65, should talk with a doctor starting at age 45. If men decide to be tested, they should have the prostate-specific antigen (PSA) blood test with or without a rectal exam. How often they are tested will depend on their PSA level and should be discussed with a physician.

ZERO Prostate Cancer is the leading national nonprofit with the mission to end prostate cancer. ZERO advances research, improves the lives of men and families, and inspires action. Visit our website: www.zerocancer.org.
