1. More than 3.1 million men are living with prostate cancer in the U.S.

2. It is estimated that there will be 248,530 new prostate cancer diagnoses in 2021.

3. Know your risk and take appropriate action. The biggest risk factors are age, race, and family history.

4. Screening for prostate cancer is quick and easy and can be done with a simple blood test and a physical exam.

5. There are no symptoms of early stage prostate cancer, making it critical to understand your risk and talk to your doctor about testing after you turn 40. Early detection saves lives.

6. Exercising regularly, maintaining a healthy weight, and eating a heart-healthy diet can help reduce your risk of prostate cancer.

7. Prostate cancer is the second leading cause of cancer death in men.

8. Nearly 98 percent of men diagnosed with prostate cancer in its early stages are still alive for years after diagnosis.

9. Every 15 minutes another American man dies from prostate cancer.

10. Knowledge is power. If you or someone you love is diagnosed with prostate cancer, learn everything you can about your diagnosis. Visit www.zerocancer.org/learn
